

GHL PRIME

GOHIGHLEVEL · FULL-STACK · AI

INTERNAL BUILD BRIEF — TEAM ONLY

Tax Preparer Platform

A step-by-step, idiot-proof build guide for our paid test project: build a GoHighLevel platform for tax preparers that matches **taxoffice.ai** — but simpler, faster, and cheaper — and turns into a reusable snapshot we can sell to hundreds of sub-accounts.

CLIENT

Vikram (US / New York)

PROJECT TYPE

Paid test → full-time

FIRST NICHE

Tax preparers

PREPARED BY

Niya

DATE

Sep 9, 2026

VERSION

v1.0

⚡ Read this first — the 60-second version

What we are building: A GoHighLevel platform for tax preparers that does everything **taxoffice.ai** does — a website, a dedicated phone number, one unified inbox (calls / texts / email), an AI receptionist, a client document-upload portal, and automations — packaged as a clean, reusable **snapshot**.

Why it matters: This is a paid **test** for a new client. If he likes our work, it becomes a full-time, ongoing engagement across many niches. This is our audition — over-deliver.

The one rule we cannot break: Set up GHL **SaaS Mode** correctly so each client pays for their *own* phone / SMS / AI usage. If we get this wrong, the account owner gets billed for everyone's usage. (See Section 6.)

Deadlines: Show visible progress on the review call **tomorrow (Thu, Sep 10)** → deliver front-end + basic automations by **Friday (Sep 11)** → full test build within **one week (by ~Wed, Sep 16)**.

Where we work: Build everything in **our own GHL agency account** for now. Share progress with a **Loom video + a clickable test link**. Post a short written update in the WhatsApp group every day.

1 The bigger picture — what the client actually wants

Vikram is a US-based tax-business owner who says he sees "tons of opportunities" but has no team to build them. He does not want funnels here and there — he wants **one agency that serves many niches**, where each niche is a pre-built template (a "snapshot") we clone for every new client.

His plan, in his own words:

"Goal is not to duplicate it; goal is to create something **similar, better, faster and cheaper**, and sell it to hundreds of sub-accounts."

The niches he named, in rough order: **tax preparers (first)**, then real estate agents, doctors, freight / trucking brokers, and bookkeeping. We do **one niche at a time**, starting with tax. Each finished niche = one clean snapshot.

Our edge over ordinary GHL agencies: we bring **full-stack + AI engineering**. When GoHighLevel can't do something natively, we build it in React / Next.js and plug it straight into HighLevel. That is our differentiator — lean on it.

How he wants to work with us

Daily. He takes a **review call every day** and expects a **written progress report every day**. The winning behaviour here is simple: **show visible progress every single day**. Momentum is what converts this test into the full-time engagement.

2 Reference sites — study them, do not copy them

Open each of these and click through every page before you build. We study them for ideas and structure — we do **not** copy their text or images word-for-word. We build our own cleaner version.

SITE	WHAT IT IS	WHAT TO TAKE FROM IT
taxoffice.ai THE target — study in full	An "operating system for a tax firm." This is the exact product we are asked to match and beat for the test.	Every feature, every page, every flow. This is the benchmark. Section 4 breaks it down feature-by-feature.
expertly.com Positioning / AI packaging	An AI-automation agency that embeds AI (voice, reply, toolbar) into businesses' existing workflows.	How to package and present ourselves as AI experts. This is the brand bar the client wants us to hit ("we will be experts like this agency").
loadstop.com Later niche — skim only	An AI-powered freight / trucking TMS (dispatch, load matching, billing).	Not this task. This is the future "freight broker" niche. Skim it now so we know where we're heading; build it later.

3 What taxoffice.ai does → how we build it in GoHighLevel

This is the heart of the build. Left column = what the reference platform does. Right column = exactly which GHL tool we use to recreate it. Build the items marked **[TEST]** first — those are what we show by Friday.

#	FEATURE ON TAXOFFICE.AI	WHAT IT DOES	WE BUILD IT IN GHL AS
1	Marketing website [TEST]	The "operating system for your tax firm" site that sells the service.	GHL Funnel / Website builder. Pages: Home, Services, About, Book a Consultation, Upload Documents, Contact, Client Login.
2	Lead intake [TEST]	Visitor enters their details on the site; the office follows up.	GHL Form / Survey embedded on the site (name, phone, email, service needed) → auto-creates a Contact + an Opportunity.
3	Dedicated phone number [TEST]	Each office gets a number to make and receive calls and texts.	GHL LC Phone number provisioned per sub-account — two-way calling + SMS.
4	Unified communication inbox [TEST]	Calls, texts and email organised in one place.	GHL Conversations — SMS, email, web chat, WhatsApp, FB/IG all in one inbox.
5	Website chat [TEST]	A chat box on the site so visitors can message instantly.	GHL Chat Widget on the website, feeding into Conversations.
6	AI receptionist ("Jasmine")	A bilingual (English/Spanish) AI that answers calls 24/7, logs them, flags follow-ups.	GHL Voice AI + Conversation AI — answers, qualifies leads, books appointments, replies in EN/ES.
7	Client document portal [TEST]	Clients upload tax documents; office sees what's still missing.	GHL upload form (v1) → branded Client Portal (v2) → custom-built portal (v3). This is GHL's weakest native area — our differentiator. See Section 7.
8	Preparer workflow / stages [TEST]	Tracks each client through the tax-prep stages.	GHL Pipeline & Opportunities: New Lead → Contacted → Docs Requested → Docs Received → In Preparation → Review → Ready to File → Filed → Paid.
9	Appointments / calendar [TEST]	Clients book consultations.	GHL Calendar with booking + confirmation + reminders.
10	Automated document chasing [TEST]	Auto reminders for missing docs, e-sign, appointments.	GHL Workflows — reminder sequences for missing documents and no-shows.
11	E-signature	Sign IRS 8879, state forms, engagement letters — unlimited.	GHL Documents & Contracts (native e-sign) for engagement letters and forms.

#	FEATURE ON TAXOFFICE.AI	WHAT IT DOES	WE BUILD IT IN GHL AS
12	Invoicing / payments	Collect prep fees from clients.	GHL Invoices & Payments (Stripe-connected).
13	Reviews / reputation	Collect and manage client reviews.	GHL Reputation + a review-request workflow.
14	Reporting / staff capacity	See staff performance and workload.	GHL Dashboards + pipeline/appointment reporting.

4 Phase 1 = two separate builds

As discussed on the call, the first phase has **two** pieces. Don't confuse them.

BUILD	WHAT IT IS	FOR THE TEST?
Build A — The client's own agency account	Vikram's own company: lead capture + follow-up + automation for <i>his</i> business of signing up tax preparers. This is his master admin account — the single holder for all billing control.	Set up later, once we're inside his account with his Stripe. Understand it; don't build it for Friday.
Build B — The Tax Preparer snapshot	The templated sub-account (everything in Section 3) that we clone for every tax-preparer client he sells to.	YES — this is the test. Build B's front-end + core automations, demoed from our own agency account.

5 The one thing we cannot get wrong — SaaS Mode & billing

🚨 Why this is critical

In GoHighLevel, if **SaaS Mode / rebilling** is not set up correctly, **every sub-account's phone, SMS, email and AI usage gets charged to the agency owner's card**. The client specifically raised this — he knows someone (in Australia) whose card got hit for all his sub-accounts' telecom and AI spend because the system was set up wrong.

Our job: make sure each client pays for their own usage — never our account, never the agency owner. Getting this right is half of why he'll trust us.

Setup checklist (idiot-proof)

- ☐ The **agency account** is the single billing-control / admin account (Vikram's master). All other accounts are sub-accounts under it.
- ☐ Enable **SaaS Mode** in the agency settings. (Requires the HighLevel agency plan tier that includes SaaS — flag to Niya to confirm the plan; no numbers in this doc.)
- ☐ Connect the **agency Stripe account** (this is how clients get billed).
- ☐ Turn **ON rebilling** for every usage service: **Phone (calls & SMS), Email, Conversation AI, Voice AI, WhatsApp, Content AI, Premium Workflow / Trigger actions, Reviews AI**.
- ☐ Set the client-facing **markup** on each service.
- ☐ Build **SaaS subscription plans** so a new client enters **their own credit card at signup**, which auto-provisions a sub-account from our snapshot.
- ☐ Turn on **wallet auto-recharge on the client sub-account** (their card — not ours).
- ☐ **Test with a dummy client:** trigger some usage and confirm the charge hits the *test* card, not the agency wallet.

Golden rule

No client sub-account should ever draw from the agency wallet. Verify this before any handoff. For the **test demo**, we build in our own agency account and simply *show that the structure and settings are correct* — the full billing wiring is finalised once we're inside Vikram's account with his Stripe.

6 The test task — exactly what we deliver

Goal of the test: prove our quality and speed so Vikram commits to the full-time engagement. **Where:** our own GHL agency account (demo). **How we show it:** a Loom walkthrough + a clickable test link he can try himself.

✓ Deliverable 1 — by Friday (Sep 11): front-end + basic automations

- **Website / funnel** for a tax preparer: Home, Services, Book a Consultation, Upload Documents, Contact — with a working **lead-capture form**.
- **Basic automations**: new-lead auto-reply (SMS + email), notify the preparer, create the opportunity in the pipeline, appointment booking + reminder, and a missing-document reminder.
- **Document-upload flow** working (a form with file-upload fields at minimum).
- **Web chat widget** on the site + a basic **Conversation AI** that answers a test question.
- **Package it**: record a Loom + generate a shareable test link → post in the WhatsApp group before the call.

✓ Deliverable 2 — within one week (~Sep 16): the full test build

- Everything above, polished, plus: **Voice AI receptionist (EN/ES)** connected to the phone number, **full pipeline stages**, **e-sign engagement letter**, an **invoice template**, and a **review-request flow**.
- Save the finished build as a **reusable snapshot** (this is the template we clone to hundreds of accounts).
- **Demonstrate the SaaS Mode / billing structure** (Section 5).

Every day in between: post a short written report in the WhatsApp group (what's done / what's next) and be ready for the daily review call.

7 Step-by-step build plan (who does what, by day)

Roles on this project:

Niya — oversight, client calls, SaaS Mode

Web Developer — website / funnel / front-end

Automation Associate — workflows, pipeline, calendar

AI Expert — Voice AI + Conversation AI

Full-Stack Dev — document portal & anything GHL can't do natively

Day 0 — Today (Wed, Sep 9) · Prep

- **Niya** Create a clean demo sub-account in our agency named "Tax Preparer — Demo".
- **All** Open taxoffice.ai and click through every page once. Write down the exact pages and flows it has.
- **Web Dev** Gather assets: placeholder brand/logo, colours, stock images, and rewritten copy (reworded from taxoffice.ai — never copy-pasted).

Day 1 — Thu (Sep 10) **Review call today**

- **Web Dev** Build the website / funnel pages + the lead-capture form (have something visible to show on the call).
- **Automation Assoc.** Build the pipeline stages + the new-lead workflow (auto-reply, notify preparer, create opportunity).
- **Niya** On the daily call: show the front-end progress, confirm the scope, capture Vikram's feedback.

Day 2 — Fri (Sep 11) **Deliverable 1 due**

- **Web Dev** Finish the site, connect the document-upload form, add the chat widget.
- **Automation Assoc.** Add the calendar + appointment reminder + missing-document reminder workflows.
- **AI Expert** Stand up a basic Conversation AI (chat) that answers FAQs and offers to book.
- **Niya** Record the Loom, generate the shareable link, post in WhatsApp, walk Vikram through it on the call.

Day 3–5 — Sat–Mon (Sep 12–14) · Full build

- **AI Expert** Add the Voice AI receptionist (EN/ES), connect it to the phone number, test call handling + logging.
- **Full-Stack Dev** Upgrade the document portal (branded Client Portal login; custom build if the client wants it exactly like taxoffice.ai).
- **Automation Assoc.** Add the e-sign engagement letter, invoice template, and review-request flow.

Day 6 — Tue (Sep 15) · QA

- **All** Run the full "Definition of Done" checklist (Section 9). Fix everything that fails.

Day 7 — Wed (Sep 16) · Ship the snapshot

- **Niya** Save the finished build as a clean reusable snapshot; demo the SaaS Mode / billing structure; run the final review call.

8 The document-upload portal — our differentiator

Clients uploading their tax documents is central to taxoffice.ai, and it's where plain GHL agencies struggle. We do it in three levels — pick the level that matches the moment.

LEVEL	WHAT IT IS	WHEN TO USE
v1 — Fast	A GHL Form / Survey with file-upload fields ("Upload your tax documents"), linked from the site. Files attach to the contact record; a workflow notifies the preparer.	Use this for Friday. Quickest path to a working demo.
v2 — Polished	A branded GHG Client Portal with login — the client sees a checklist of required documents and uploads them; office gets "what's missing" visibility.	Days 3–5, if time allows. Closer to the taxoffice.ai experience.
v3 — Custom	A custom upload portal built in React / Next.js , embedded into GHG via a custom menu link.	Only if Vikram wants it exactly like taxoffice.ai. This is where our full-stack dev makes us stand out vs. ordinary GHG agencies.

On the call, show v1 working and mention v2/v3 as the upgrade path — it signals we can go deeper than a typical agency.

9 "Definition of Done" — Friday QA checklist

Nothing ships to Vikram until every box is ticked. Test the link in a fresh incognito window before you send it.

- ☐ Website loads on **desktop and mobile** — no broken links or images.
- ☐ Lead form submits → **creates a contact + an opportunity** in the pipeline.
- ☐ New-lead **auto-reply (SMS + email)** fires within seconds.
- ☐ The preparer gets an **internal notification** of the new lead.
- ☐ Booking calendar works → sends a **confirmation and a reminder**.
- ☐ Document-upload form works → the **file appears on the contact** → preparer is notified.
- ☐ Web chat widget appears → **Conversation AI answers** a test question.
- ☐ Loom recorded → **shareable test link works from an outside browser** (test in incognito).
- ☐ Short **written report posted** in the WhatsApp group.

10 Guardrails — do's & don'ts

Do

- ✓ Build **clean and templatable** — this becomes a snapshot cloned to hundreds of accounts.
- ✓ **Reword** all copy in our own words; use our own placeholder images.
- ✓ **Test every automation** yourself before showing the client.
- ✓ Post a **daily written report** and show visible progress every day.
- ✓ Keep it **simple and fast** — similar, better, faster, cheaper.

Don't

- ✗ **Copy** taxoffice.ai's text or images verbatim.
- ✗ **Over-engineer** before Friday — front-end + basic automations first.
- ✗ Build anything that would charge usage to **our / the agency's card** without SaaS rebilling in place.
- ✗ **Go quiet**. Daily visible progress is how we win this client.

Note: all commercial terms (pricing, milestones, payments) are handled by Niya and are **not** part of this document. If a pricing question comes up, route it to Niya.

11 Communication & cadence

CHANNEL	USE
WhatsApp group (with Vikram)	Primary channel. Post a short daily written report: what's done, what's next, any blockers.
Daily review call	Vikram takes a review every day — have something new to show each time.
Loom + test link	How we hand over each deliverable so he can test it himself.
Internal (office)	Morning stand-up; Niya assigns and updates tasks; blockers surfaced same day.

12 Quick GHL glossary (so everyone's on the same page)

TERM	PLAIN-ENGLISH MEANING
Snapshot	A saved template of a whole sub-account (funnels, workflows, pipelines, calendars). Clone it to set up a new client in minutes.
Sub-account	One client's own space inside the agency. Each tax preparer = one sub-account.
SaaS Mode	The setting that lets us resell GHL under our brand and bill clients for their own usage. Getting this right = client pays, not us.
LC Phone	GHL's built-in phone system (calls + SMS) for each sub-account.
Conversations	The single inbox that merges SMS, email, web chat, WhatsApp and social messages.
Workflow	An automation: "when X happens, do Y" (e.g. new lead → send text + notify preparer).
Pipeline / Opportunity	The board that tracks each client through stages (New Lead → ... → Filed → Paid).
Conversation AI / Voice AI	GHL's AI that chats or talks with leads — answers questions, qualifies, books. Our stand-in for "Jasmine".
Client Portal	A logged-in area where a client can upload documents and see their status.
Documents & Contracts	GHL's native e-signature tool for engagement letters and forms.
